

THE STUDIO MANUAL

Standard Operating Logic & Precision Rendering

01. ENGINE ARCHITECTURE

KRATOS is a high-stakes document engine designed for professional-grade output. Built on a **Native-Canvas Architecture**, it bypasses traditional cloud-rendering to provide a direct, hardware-accelerated editing experience hard-locked to international A4 dimensions.

02. ATOMIC PRINT LOGIC

To maintain structural integrity during PDF export, users must adhere to the KRATOS rendering protocol. Browser-based scaling must be disabled to ensure that the internal $210\text{mm} \times 297\text{mm}$ grid translates perfectly to the physical page.

Required Print Configuration: Set Scale to 100% , Margins to "None", and ensure Background Graphics are enabled to preserve the high-fidelity branding elements.

03. PERSISTENCE

KRATOS utilizes localized browser storage. Your data is processed in real-time and remains within your machine's secure environment. No external server transmission occurs, ensuring absolute privacy for sensitive documentation.
