
PRIVACY BY ARCHITECTURE

Data Sovereignty & Client-Side Security

01. ZERO DATA HARVESTING

KRATOS operates on a strict open-access model. We do not require account registration, email verification, or identity tracking. We believe professional power should not come at the cost of personal privacy. We do not collect names, emails, or biometric data.

02. LOCALIZED EXECUTION

All document sculpting and PDF generation happen locally on your hardware. KRATOS does not store, transmit, or relay the content of your invoices, certificates, or NDAs. Once your session ends or cache is cleared, the data is permanently erased from your machine's volatile memory. Uploaded assets (logos/signatures) are stored as Base64 strings in your local cache only.

03. TELEMETRY & CDNS

We collect zero Personally Identifiable Information (PII). Minimal, anonymous telemetry may be used to monitor engine load, but this is never linked to document content or user identity. We utilize global CDNs for assets; while they detect user-agents for delivery, they remain isolated from the document canvas.
